

Requirement	What you need to demonstrate
1. Single-image VQA	Upload one satellite image → ask a question → AI answers
2. Another single-image task	For example, image captioning, object detection, or visual grounding
3. Multitemporal change understanding	Give Image A + Image B from different dates → identify/describe changes
4. Optical–SAR analysis	Give corresponding optical + SAR images → analyze them jointly
5. Agentic orchestration	An agent decides which model/tool to call, executes it, and combines the results
